

## Technical Thermodynamics; The Theory of Vapors (Paperback)

Filesize: 8.62 MB

### ***Reviews***

*These types of book is the greatest ebook readily available. I was able to comprehend every little thing using this published e pdf. I realized this pdf from my dad and i encouraged this publication to discover.*

*(Dr. Porter Mitchell)*

## TECHNICAL THERMODYNAMICS; THE THEORY OF VAPORS (PAPERBACK)

To download **Technical Thermodynamics; The Theory of Vapors (Paperback)** eBook, remember to follow the web link below and download the file or gain access to other information which are have conjunction with TECHNICAL THERMODYNAMICS; THE THEORY OF VAPORS (PAPERBACK) ebook.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 edition. Excerpt: .pv = BT--Cp in equation (56), and also use equation (30), p. 231, remembering that with the vapor of water we substitute  $K-1$  m = n, K we also get for the steam heat  $j-(i-r)$ , or, after using equation (51), p. 245, we find after some transformations  $J-J_0+l-c_9T$  (56c) For very great superheating or for the gaseous state there follows from this  $J=J_0+c_vT$ , the same equation which was found earlier for the gas heat or heat contents of a gas (Vol. I, p. 132). If, in the same way, we transform equation (57) which was first found for the total heat X, we get for the vapor of water  $W_0+cp-P$ , (57c) and this equation differs from that given by Regnault in that it is simultaneously valid for saturated and superheated steam, while Regnault's empirical formula is only valid for dry saturated steam. Let us assume superheated steam of pressure p and temperature T and let T be the temperature of dry saturated steam of the same pressure, then the total heat X of the latter is If we subtract this equation from equation (57c) we get  $X=X+cp(T-T)$ , or, utilizing Regnault's formula and the temperature according to Celsius Fahrenheit, we get  $X = (606.5 + 0.305 t) + cp(t-t)$  (57d)  $/l = 1091.7 + 0.305U - 32) + c(-J)$ , an equation which has long and often been used for the calculation of the total heat of superheated steam when the superheat is (jt-f)....
